STOR-IT H2O

INSTALLATION INCLUDES

Job site inspection and professional preparation to ensure the safest tank set possible. This usually includes the removal of grass and loose rock in a 9 ft circumference. A compacted base or a bed of washed sand is put in place as a cushion to protect your tank from vibration.

For a small additional charge, we offer:

- 9' x 9' concrete slab poured on site to allow total underground plumbing
- Lock down man hole covers
- Adaptable outlet for fire hose connection
- Spray bar installation
- Five - year guarantee

Cleaning and repair of existing systems available.

All repairs and cleaning are performed inside the tank and usually completed in one day
